

Figure 1: HPLC profile of 20% ethanol extract of Eugenia jambolana at various wavelength

Figure 2 shows HPLC profiles of leads with promising insulin mimetics.

Figure 2 shows HPLC profiles of leads with promising insulin mimetics.

Figure 3 shows the data from table 9 expressed as a percent of the counts observed in the cells + insulin control. Four plant extracts stimulated [<sup>3</sup>H]-deoxyglucose uptake by 1.5 to 2-fold above that seen with insulin alone.

Figure 4 showing HPLC profiles of insulin sensitizers:

Figure 5: The data from Table 5 are expressed as a percent of the counts observed in the cells + insulin control

**Figure 6:** HPLC profiles of medicinal plants that shows alpha-glucosidase inhibitor activities.

Figure 7: shows that four medicinal plant fractions showed significant  $\alpha$ -glucosidase inhibitory activities in the screening procedure. The relative inhibitory potency was calculated a reciprocal of the IC<sub>50</sub>, using the following formula:

$$\text{Relative Potency} = 1000 / \text{IC}_{50}$$
